

Day1 Assignment

1.Switch Case

```
Code: import java.util.Scanner;

public class SwitchCaseSeason
{
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.println("enter the number between 1
to 12");
        int month =sc.nextInt();
        switch(month) {
            case 1:
            case 2:
            case 12:
                System.out.println("Winter");
                break;
            case 3:
            case 4:
            case 5:
                System.out.println("Spring");
                Break;
            case 6:
            case 7:
            case 8:
                System.out.println("Summer");
                break;
            case 9:
            case 10:
            case 11:
                System.out.println("Autumn");
                break;
            default :
                System.out.println("month number not
valid");
        }
    }
}
```

2. Not using nested if and logical operators

Code:

```
import java.util.Scanner;
public class SubjectMarks {
    static int temp = 0;
    public static void main(String[] args) {
        new SubjectMarks().callInput();
    }
    void callInput() {
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter marks for subjects");
        int first = sc.nextInt();
        int second = sc.nextInt();
        int third = sc.nextInt();
        int sum = first + second + third;
        ifCondition(first, second, third, sum);
    }
    void ifCondition(int first, int second, int third, int sum)
    {
        if(first >= 40)
            temp++;
        if(second >= 40)
            temp++;
        if(third >= 40)
            temp++;
        if(sum >= 125)
            temp++;
        if(temp == 4)
            System.out.println("pass");
        else
            System.out.println("fail");
    }
}
```
